Skills

Programming Languages and Tech.

Rust, Scala, WGSL, PL/SQL

ndarray (-linalg), wgpu, tokio, axum, MPI, Apache Slurm, Apache Spark, tapir, http4s, fs2

Databases, storage formats and a like.

PostgreSQL, Redis, Apache Kafka, Apache Arrow

Clouds and Containerization

HPE Cray EX (OLCF), Apptainer / Singularity, podman

CI/DI

Gitlab CI, Github Actions, TeamCity, Ansible

Languages

English	B2+
Serbian	B1
Russian	C2

ABOUT ME

I am a seasoned professional programmer with more than 10+ years of experience in various fields and domains.

In recent years, I am working as a Rust HPC programmer in the biotech field, specializing in optimizing the performance and resource usage of biostatistical and biocomputational pipelines to optimize their runtime characteristics for both Beowulf and supercomputer environments (OLCF). My extensive experience as a Scala developer has given me a solid understanding of functional, type-level and type driven programming, which enables me to deliver robust, high-quality software, that builds on the strengths Rust already offers.

Additionally, I have completed graduate-level courses in Bioinformatics, Whole Genome (WGS) and Single-Cell Sequencing, and Genomic Networks. This formal training demonstrates my passion and dedication to delivering top-quality software, as truly effective solutions require a deep understanding of the field.

My efforts, to a sensible extent, helped biologists to develop at least two molecules for treating orphan diseases, and one of them is out of clinical trials.

Besides that I have contributed to the back-end development of a well-known MMO game, an IoT framework, a London minicab automation system, and a bus station automation project.

SUMMARY

- 10+ years of professional experience in the Information Technology industry;
- Rich experience in Rust, Scala, Python programming;
- Solid background in functional and type-level programming paradigm;
- Development and expertise highlights:
 - HPC application development for supercomputers;
 - Client-server applications development;
 - Continuous Integration management;
 - Advanced technical troubleshooting, application profiling and performance tuning;
- Experience in team leadership.

EXPERIENCE

Dec 2019 - Present **HPC, Rust programmer**
BPGBio

The project aim was to learn the structure of biological networks from omics data assessed with patient data using a combined constraint-based approach and Bayesian score-based method (a framework based on S. Boettcher deal package) in a distributed environment.

Tech. responsibilities

- Prepare SIF containers to run biocomputational pipelines on OLCF supercomputer.
- Develop WGSL compute shaders to run some parts of the computational pipelines on GPGPU in a Beowulf cluster.
- Made an extension for `rsmpl` to support return error codes. And based on those changes I implemented User-Level Fault Mitigation (MPI ULFM) logic to address partial cluster failures.
- Performance optimization and tuning using `vtune`, `mpip`, `heaptrack`, `dhat`, `llvm sanitizers`, `criterion` and `iai` (`cachegrind`);
- Algorithms optimization;
- Porting of R, Python and Wolfram Mathematica scripts, produced by mathematicians to Rust;
- Contributed missing functionality to special crate (`tri-gamma` function), `rsmpl` (group splitting by colors and tags, User Level Failure Mitigation);
- Design and implementation of auxiliary programs requested by the analytics department;
- Automation of development and deployment processes (`gitlab-ci`, `podman`);
- HTTP API development using `axum`, `utoipa` and `http4s` for Scala-based services;

- Implementing automated tests (property, unit, mutation, integration and e2e) and benchmarks (criterion, iai);
- Bug fixing in HPC cluster environment (pmpi, vtune);
- Developing and maintaining open source components required by our software: `kendalls` crate for Kendall's tau-b rank correlation, `hoconlight` crate - a peg parser and deserializer of Akka `hocon` configuration files.

Non technical

- Onboarding of programmers and scientists;
- Technical-leading and owning the product;
- Helping team members to develop professional development plans;
- Conducting technical interviews;
- Mentoring and conducting summer schools for rust programmers;
- Writing user and programmer guides, software design documents (tectonic, latex, confluence, typst), SOWs.

Tech. Stack: Rust, Apache Arrow, BLAS/LAPACK (ndarray-linalg), MPI, Slurm, Apache Kafka

Mar 2016 - Dec 2019

Scala, Rust programmer

BERG BIOSYSTEMS

Design and Developed Mesos Framework to schedule and execute bioinformatics pipelines. The framework mostly based on Lightbend stack with addition of TypeLevel stack (circe, cats-effect, fs2) for more lightweight utilities and more granular control of task termination.

Responsibilities:

- Developing utilities used in biostatistical pipelines;
- Writing user guides, SOWs, RFCs;
- Reviewing DOI:10.1089/cmb.2019.0210, DOI:10.3390/app11062466;
- Coordinating two teams of developers, resolving conflict situations.

Tech. Stack: Apache Mesos, Scala 2, Lightbend stack, Typelevel-stack (fs2, cats-effect), Apache Kafka, ndarray, ndarray-linalg, criterion.

Oct 2015 - Feb 2016

Senior Software Developer

DATAART

US-based healthcare network and healthcare provider. I was working on a pluggable module, that acted as a mediator between Medicaid Analytics Performance Portal (MAPP) HHTS and the internal Health Home system of the client. The module I developed aggregated data and events in the form of Web API call and CSV files from both systems and provided instruments to synchronize internal state of these systems databases.

- Assignment and billing workflows implementation;
- Participating in tracking workflow implementation;
- Initial data importers;
- Health Home tracking system integration layer.

Tech. Stack: Scala, Play Framework, PostgreSQL, Slick, TeamCity

Jun 2015 - Oct 2015

Senior Developer

DATAART

The goal of the project was to develop the sales system to be used by call center agents to book hotels for the clients.

Based on different criteria, the system searched hotels in multiple sources providing an agent with all relevant information about a client. The system utilized microservice architecture, which allowed decoupling all logical subsystem, managing and developing them independently of each other.

Responsibilities:

- Call dispatching service development that notifies agents about incoming phone calls;
- Integration with internal CRM system;
- Next Caller and Piwik integration;
- Payment gateway integration;
- Back-end RESTful API development.

Tach Stack: Python, PostgreSQL, Tornado, Redis, Django Rest framework, Ansible.

Mar 2014 - Jun 2015

Senior Software Developer

WARGAMING, GLOBAL MAP

		The application allowed clan leaders to plan their strategy on capturing and controlling areas on the global world map, managing clan resources, participating in tournaments and landing battles. The development was focused on back-end optimization. • Preparation of new game events; • Fixing bugs; • Implemented “mini-quests” and corresponding reward, medal system. Tech. Stack: Python, Django, PostgreSQL, Celery, RabbitMQ.
Sep 2013 - Feb 2014	Tech. Lead BOUNCECARS	The project aimed to develop mobile applications for taxi drivers and passengers, an automated dispatching system to manage jobs, and an administrative interface to manage the system. The administration system tracked drivers’ statistics and location; it issued receipts for passengers and statements for drivers. The dispatching system automatically searched for and assigned drivers to passengers, and served as a high-load interface for mobile applications. All three parts of the system communicated with each other through a custom-made message-based channel. Activities: • Developing front-end and accounting back-end; • Creating a public cloud application to private cloud integration; • Refactoring and improving the application engine; • Deploying and managing a continuous integration server. Tech. Stack: Django, Celery, Redis, webapp2, Backbone, TeamCity, PostgreSQL, Google Cloud Platform.
Mar 2013 - Sep 2013	Software Developer BTQ FINACIAL	Worked on the application that tracks care management activities for adults with chronic medical and behavioral conditions. I was responsible for developing the web interface and backend ETL service. The ETL layer is to integrate with external services provided by NyS Department of Health and other health care service providers. The application has strong security and audit, which make it compliant to HIPPA. Tech. Stack: C#, JavaScript, T-SQL
Jan 2011 - Mar 2013	Senior Software Developer ZS	I worked on a web-based dashboard and computational engine that used statistical methods to predict prospective markets for Drug sales. Tech. Stack: ASP.NET, C#, VBA, MS SQL Server, T-SQL.
Aug 2010 - Jan 2011	Software Developer DATAART	The application allowed clan leaders to plan their strategy on capturing and controlling areas on the global world map, managing clan resources, participating in tournaments and landing battles. The development was focused on back-end optimization. • Release management; • CI/DI pipelines; • Design and Develop software that integrates ophthalmologic perimeters with EMR system; • Implemented a report generation engine. Tech. Stack: ASP.NET, C#, WPF, Silverlight.
2007 - 2010	Software Developer KANAR SOFTWARE	I designed and developed the first version of eSigTek - a web-based software to sign documents electronically. One of the features that stood out in the software was the online PDF forms editor. I was responsible for features planning and leading a team of two programmers and a QA. New feature development and bug fixing for Medical Staff Management and Recruitment System for the USA market. I modernized the front-end part of the system such that it works not only on IE6 and introduced PrototypeJS. Tech. Stack: ASP.NET, C#, MS SQL Server, T-SQL, jQuery.
2005 - 2006	Software Developer	

OLVEN-AUTO

I participated in the development of the Bus Station Control System. The developed solution consists of a back-end subsystem that manages bus routes, creates schedules, and exchanges tickets between different bus stations; a front-end that provides GUI to bus station's staff; and a website that customers can use to buy ticks online.

- I worked on the tickets exchange back-end service;
- porting Delphi GUI application to gtkmm;
- integration with a cash register machine, and custom PAM development.

Tech. Stack: Firebird, PHP, C++ (gtkmm).

2003 - 2006

Web Developer

ZEBRA-GROUP

- Development of modules for the company's internal CMS.

Tech. Stack: Python, mailman.

OPEN SOURCE CONTRIBUTIONS

<https://github.com/blumenplace/skju> — eather quake detection BLE mesh network

- Architecural design of the project, and mentoring.
- defmt interceptor for Renode simulator.

<https://crates.io/crates/special> — provides special functions for Rust

- Added an implementation of the `tri-gamma` function.

<https://crates.io/crates/mpi> — MPI bindings for Rust

- Added split by node / color functionality.
- Ongoing effort on merging optional ULFM support and errors in function call results.

<https://crates.io/crates/kendalls> — Kendall's τ -B

- Maintainer.
- Implemented Kendall's τ -b algorithm.

<https://github.com/zolkko/hocon> — lightweight HOCON parser

- Maintainer, developed a parser to ease transition from Lightbend and Type-level stack (Scala) to Rust (`serde_yaml`).

2016

<https://github.com/ARMmbed/mbed-os>

- Bug fixes in Arm Mbed OS USB (CDC) for STM32.

EDUCATION

2025-2026

Certificate of Professional Development

NOVOSIBIRSK STATE UNIVERSITY (NSU)

- Machine learning and neural networks in biology and medicine.
(27.11.2025-27.03.2026 / N.542425935861).
- Databaseses in biology and medicine. Genomic networks.
(24.06.2025-25.08.2025 / N.542420891774).

2010

Master of Science in Software Engineering

VORONEZH STATE TECHNICAL UNIVERSITY

📍 VORONEZH, RUSSIA

•

2007

Bachelor's Degree in Electrical Engineering

ULYANOVSK STATE TECHNICAL UNIVERSITY

📍 ULYANOVSK, RUSSIA

•

2004

College Degree in Software Engineering

ULJANOVSKIY AVIACIONIJ KOLEDZH

📍 ULYANOVSK, RUSSIA

SIGNIFICANT CERTIFICATES AND AWARDS
